

Step-Down switching regulator IC with Over Current Protection

■ GENERAL DESCRIPTION

The **NJU7640** is a low voltage operation high-speed switching regulator control IC for step-down converter, with a pulse-by-pulse over-current protection. The pulse-by-pulse over-current protection circuit can limit the over current in switching operation.

It incorporates a totem pole output, which can drive an external MOS-FET easily. It also has a soft-start function and dead time control and their times are all adjustable with external parts.

The NJU7640 is available in a small and thin 8-lead MSOP (TVSP) package.
