THERMISTOR

"Thermistor" is the generic name given to thermally sensitive resistors. Negative temperature coefficient thermistor is generally called as thermistor. Thermistor is a semiconducting ceramic resistor produced by sintering the materials at high temperature and made mainly from metal oxide. Depending on the manufacturing method and the structure, there are many shapes and characteristics for various purposes such as temperature measurement, temperature compensation and etc. The thermistor resistance values, unless otherwise specified, are classified at a standard temperature of 25°C. B value is calculated from the resistance values at 25°C and 85°C.

Resistance -Temperature Characteristics

The resistance of a temperature is solely a function of its absolute temperature. Since electrical power being dissipated within a temperature might heat above its ambient temperature and thereby reduce its resistance, it is necessary to test for resistance with temperature. The resistance so measured is called RT, which means the resistance at essentially zero-power.

The mathematical expression which relates the resistance and the absolute temperature of a thermistor is as follows:

$$R_a = R_b \exp \left[B \left(\frac{1}{T_1} - \frac{1}{T_2} \right) \right]$$

Where: R_a is the resistance at absolute temperature T_1
 R_b is the resistance at absolute temperature T_2
 B is a constant which depends on the material of the thermistor

Unless otherwise specified, all values of B are determined from measurements made at 25°C and 85°C.

The temperature coefficient of resistance α is expressed in the following equation:

$$\alpha = - \frac{B}{T^2} \times 100 (\%/^{\circ}\text{C})$$

Dissipation factor

Dissipation factor (δ) is power in milliwatts required to raise thermistor temperature 1°C. Measured with thermistor suspended by its leads in a specified environment.

$$\delta = \frac{P}{\Delta t} \text{ (mW/}^{\circ}\text{C)}$$

P : Power (mW)

Δt : Raise temperature (°C)

Thermal time constant

Thermal time constant (τ_a) is the time required by a thermistor to change 63% of the difference between its initial and final temperature. Measured with thermistor suspended by its leads in specified environment.

TEMPERATURE SENSOR

The TEMPERATURE SENSOR is assembled one with various parts and thermistor devices according to the required applications. Its electric characteristics are the same as those of thermistor devices. Variable type of sensor can be utilized for detecting or controlling temperature because its operating temperature range is wide from -50 to $+300^{\circ}\text{C}$. Standard TEMPERATURE SENSOR is available in accordance with the applications such as measurements of liquid, atmosphere and surface temperature.

AP THERMISTOR

The AP Thermistor features higher accuracy and higher resistance to heat than our existing high-precision thermistor. AP Thermistor suits various types of application.

Features

- Super high-precision : Tolerance on R_{25} and $B_{25/85}$ is $\pm 0.5\%$.
- Narrow deviation in wide temperature range: Accurate temperature detecting with tolerance of $\pm 0.5^\circ\text{C}$ in -60°C to 70°C .
- High resistance to heat : Category temperature range is -60°C ~ 150°C .

Applications

Portable devices, Battery packs, Fan motor, Automobile, Office automation equipment, Electrical household appliances, Security devices, Thermometer, Measurement equipment, Temperature detecting, etc.

*1 R_{25} : Zero-power resistance value at 25°C.

*2 B-value : Calculated from the zero-power resistance values measured at 25°C and 85°C.

*3 Time when Thermistor temperature reaches 63.2% of the temperature difference. The value is measured in still air.

HIGH PRECISION THERMISTOR

AT THERMISTOR

The AT thermistor is a high-precision thermal sensing device featuring extremely small B-value tolerance and resistance. When used as a temperature gauge, the AT thermistor requires no adjustment between the control circuit and the sensor.

This insures temperature precision of $\pm 0.3^{\circ}\text{C}$. Temperature indicators and control instruments are now available for use with the thermistor.

Unit(kΩ)

ULTIMATE THINNESS, JT THERMISTOR

500 μ m only

JT THERMISTOR

JT thermistors feature ultra thinness of 500 μ m and superior electrical insulation. It is possible to use with safety in ambience that might contact with electrodes.

ET THERMISTOR

The ET thermistor is smaller version of the AT thermistor. Its fast response time and high reliability makes it particularly suitable for use in medical equipment and thermometers. Manufactured by full-automated production line, all ET thermistors have identical size and that makes it possible to assemble sensors automatically.

SURFACE MOUNT TYPE THERMISTOR

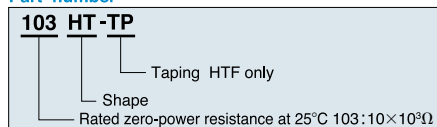

HT THERMISTOR

HT thermistors are entirely new type of thermistor for surface mounting (by reflow soldering) and were acquired from advanced technology.

Our HT thermistors are adapted metal electrodes packaged in a resin mold, unlike conventional chip thermistors, and can offer $\pm 2\%$ tolerance for a resistance value at 25°C.

HT series (SMD Thermistor) is not only compact-surface mounting type but also highly accurate and reliable.

Unit (kΩ)

THIN FILM TYPE THERMISTOR

FT THERMISTOR

The FT thermistors, the highly reliable thermistors, are characterized by their fast response time, which was made possible by the miniaturization of the thermistor dimensions. FT thermistors are also heat-resistant type. FT thermistors are the most excellent products of today's chip thermistors manufacturing.

Part number

APPLICATION

OA sensor, Measuring instrument, Medical instrument, LCD, etc.

	Electrode type	Connection method	Temperature range in use (°C)
1	Pt	Conductive resins	-40~+250(+350)
2	Au/Ni	Solder	-40~+125
3	Au	Wire-bonding	-40~+250

We can also custom-make FT THERMISTOR to better suit your applications. Please consult our sales staff.

CHIP TYPE THERMISTOR

KT THERMISTOR

Chip thermistors are specially processed, highly reliable thermistors. They can be face-bonded to act as thermal compensators for ICs and they are manufactured in sizes down to 1 square mm, they can also be used to detect temperature with relatively small time constants.

KT-type Part number

Precautions

- Do not expose the thermistors to high soldering heat for more than specified time. (260°C for not longer than 10s is recommended)

Dimensions

Reflow soldering profile

Taping (1608 type)

HIGH HEAT-RESISTANCE AND HIGH SENSITIVE THERMISTOR

GT THERMISTOR

GT thermistor is combined both superior feature of BT thermistor and ET thermistor as fast response time, high reliability, wide category temperature range, high moisture proof, high accuracy and reasonable price.

GT thermistor is made up of a high quality thermistor element and the lead wire is connected to the thermistor element by alloyed technology, and glass coating for the thermistor element.

NON-CONTACT SENSOR (Infrared sensing temperature detector)

NC SENSOR

NC SENSOR is the remote temperature sensor consisting of two precision thermistors.

1.Features

- Larger output in comparison with other IR sensors.
- Operating temperature of up to 150°C.
- Minimum negative influence caused by a dew and/or dust.

2.Applications

- Temperature measurement of the LBP and PPC heat-roller.
- Any other measurement requiring the remote-sensing.

3. Dimensions

POWER THERMISTOR

The POWER THERMISTOR is a device for suppressing inrush current to an electric circuit. Circuits including electric bulbs or capacitors induce an inrush current more than 100 times the normal current when the circuit switch is turned on. The POWER THERMISTOR in the circuits protects electric equipments from being damaged by limiting the inrush current.

Application

The power thermistor will suppress inrush current which is caused by a capacitor, filament for a bulb, inverter for fluorescent lamp, a heater and etc., also will control fan motor speed of cooler for electric circuit.

It is developed to use for power supply of TV, VCR instead of cement resistor.

How to use the power thermistor

The most suitable power thermistor for the above circuit is required to fulfill the following terms and conditions.

1. The permissible current at ambient temperature of 55°C should be over 2A.
2. The thermistor resistance for suppressive current which becomes below 30A should be over 4.2 ohm from the under-mentioned formula.

$$\frac{\sqrt{2} V_E \times 1.1}{R_C + R_{25}} \leq 30$$

R_C : Internal resistance value in the circuit is 1 ohm (100V/100A)

R_{25} : Rated zero-power resistance at 25°C

3. Max. capacitance shall be over 2000μF at AC 100V.

Accordingly, suitable thermistors are 6D2-22, 5D2-18 and 8D2-18, and if we consider in the points of small time constant which means a small size and large effect for suppressive current which means large rated zero-power resistance, 8D2-18 is the most suitable one.

Use the following circuit in the power supply for 100V and 200V.

Thermal time constant

If ambient temperature of a thermistor is changed from T_1 to T_2 suddenly, temperature of the thermistor changes slowly.

The time constant means the time when temperature of the thermistor reaches 63% of the temperature difference.

Residual resistance

If current is flowed through a thermistor, any heat will be generated in the thermistor by which its resistance will be decreased, however, a decrease of a resistance will be stabilized at a saturation resistance value which is determined by impressed electric power and a dissipation constant. The residual resistance value means maximum saturation resistance value when the maximum permissible current is flowed through the thermistor.

Temperature coefficient α

The temperature coefficient of a thermistor is expressed by the following equation ;

$$\alpha = -\frac{B}{T_2} \times 100 (\%/^{\circ}\text{C})$$

Dissipation factor

If small voltage is applied to a thermistor, small current will flow which produce enough heat in the thermistor. Dissipation factor is electric power which make 1°C raise by heat in a thermistor.

$$\delta = \frac{P}{\Delta t} (\text{mW}/^{\circ}\text{C})$$

P is applied electric power.

Δt is risen temperature of the thermistor.

Maximum permissible current

If the maximum permissible current flows to a thermistor at 25°C, temperature of the thermistor rises to 200°C, (160°C). When ambient temperature is above 25°C, the maximum permissible current shall be over reduced as the maximum permissible current reduction curve.

Reliability tests

Version1

Dry heat test

Test sample is exposed in air at 160°C for 1,000 hours. $\Delta R_{25}/R_{25} \pm 15\%$

Damp heat test

Test sample is exposed in atmosphere of 95%RH at 40°C for 1,000 hours. $\Delta R_{25}/R_{25} \pm 15\%$

Load test

Test sample is applied the maximum rating current in air at 25°C for 1,000 hours. $\Delta R_{25}/R_{25} \pm 15\%$

Change of temperature

Test sample is given 10 times of the following temperature cycle,
 → -40°C for 30 minutes → room temperature for 5 minutes →
 → 160°C for 30 minutes → room temperature for 5 minutes.
 $\Delta R_{25}/R_{25} \pm 15\%$

Version2

Dry heat test

Test sample is exposed in air at 150°C~200°C for 1,000 hours. $\Delta R_{25}/R_{25} \pm 20\%$

Damp heat test

Test sample is exposed in atmosphere of 95%RH at 40°C for 1,000 hours. $\Delta R_{25}/R_{25} \pm 15\%$

Load test

Test sample is applied the maximum rating current in air at 25°C for 1,000 hours. $\Delta R_{25}/R_{25} \pm 20\%$

Change of temperature

Test sample is given 10 times of the following temperature cycle,
 → -40°C for 30 minutes → room temperature for 5 minutes →
 → 160°C for 30 minutes → room temperature for 5 minutes.
 $\Delta R_{25}/R_{25} \pm 15\%$

Part number

Applications

- Switching power supply
- Adapter
- LC, Plasma TV, DVD player
- AV, home electricity, Air-con
- OA, printer, PC
- etc.

TRANSIENT VOLTAGE SUPPRESSOR

VRD

VRD is a transient voltage suppressor used for protecting electric circuits from surge voltage and thus preventing breakdown.

VRD has superior surge suppression characteristics, such as extremely fast response time, very low clamping voltage, and high surge capacity. Unlike metal oxide varistors, VRD does not have characteristics to change with surge variations within the rated capacity. This feature comprises another superior characteristics of the VRD as a transient voltage suppressors.

Part number

Z2 033 U - 52Z	52Z : Axial tapping winding type
	52R : Axial tapping relay type
	FT : Radial form tapping type
	Nil : individually packed in a bag
	U : Uni-Polar
	Nil : Bi-Polar
	Break down voltage
	Type
	Z2 : Rated electricity 1.0W
	Z6 : Rated electricity 2.0W
	ZD : Rated electricity 0.5W (reverse blocking type)

Electrical characteristics

Figure 1 shows the electrical characteristics. Bipolar type has almost symmetrical breakdown Voltage (V_B) The reverse breakdown voltage of the ZD type is 200 Volts or more at $10\mu A$ DC.

Fig 1

Taping

One of standard taping is as shown in Figure.

Fig 2

Taping qty

Part series	Taping method	Qty(pcs)	
Z2,Z2U	Axial tapping	reel type	5,000
		winding type	2,000
	Radial tapping	winding type	2,000
Z6,Z6U	Axial tapping	reel type	2,500
		winding type	1,000

Surge capability

Allowable surge capability (P_{PPM}) is determined by the following equation:

$$P_{PPM} = I_{PPM} \times V_C$$

I_{PPM} : Rated peak impulse current

V_C : clamping voltage

The allowable surge capability (Rated peak impulse power dissipation P_{PPM}) of VRD is shown in following Figure 3 and the surge capability derating characteristics are shown in Figure 6.

Fig 3

Surge waveform

There are many types of surge waveform depending on the source of the surge. For the VRD surge suppression characteristics test, the EXP waveform shown below is used. The EXP waveform is shown as t_a/t_b depending on the time width, however 10/1000 waveform is used as the standard test waveform.

Fig 4

Surge suppression characteristics

When EXP waveform is applied, the surge suppression waveform shown in the figure 5 can be observed.

Power derating

Z2 type VRD has bipolar or unipolar electrical characteristics.

Maximum ratings

Rated peak impulse power dissipation
:500 W (10/1000 μ s)
6.00 kW (8/20 μ s)

Rated average power dissipation:1W
Operating and storage temperature
: -40°C to 125°C

Power derating

Pinch-off current Temperature

CRD in parallel

The use of CRD in parallel increases their current handling capabilities.

Increasing the voltage range using a zener diode

Connecting zener diodes in series with the line ensures that the current is constant in high-voltage area.

The compensation of current reduction due to self heating

Placing resistors in parallel with CRD can correct any current decrease when the applied voltage increases. The following values are typical for correction resistors.

E-102	1MΩ	E-352	82kΩ
E-152	390kΩ	E-452	56kΩ
E-202	240kΩ	E-562	39kΩ
E-272	120kΩ		

Compensative resistor is not necessary if the current value is less than 1 mA.

Dynamic characteristics (saturation characteristics)

METAL OXIDE VARISTOR

ZENAMIC

ZENAMIC is the product name of a metal oxide varistor. ZENAMIC Transient/Surge Absorber, Series D is newly released through our continued research in ceramic material composition of ZnO varistor and manufacturing process, featuring large surge current handling capability and energy handling capability for absorbing transient overvoltage in compact size.

Features

- Improved in "Surge Current Handling Capability (at 8/20 μ s, 2 times)" by about 2 times over the current.
- Very large "Energy Handling Capability" absorbing transient overvoltages in compact sizes.
- Lower Clamping Voltage for better surge protection.
- Fast response to high speed transient/surge voltage.
- Wide products range for transient/surge protection on AC 100V to AC 480V nominal system with the maximum peak current ratings of 600A to 7000A (at 8/20 μ s, 2 times).

V-I characteristics

ZENAMIC has the forward-reverse symmetrical electrical characteristics as shown in the figure 1. The voltage-current curves show the varistor characteristics in the range 1 μA to 10⁴A, and show the resistance characteristics for the range under 1 μA and over 10⁴A in the figure 2. The voltage across terminals when test current (I_t: 1 mA) is applied to ZENAMIC is the standard varistor voltage (V_Z), and the voltage across terminals when a standard surge (I_p) is applied represents the maximum suppression voltage (V_c).

Fig 1

Fig 2

Temperature characteristics

In the small current range, ZENAMIC features outstanding temperature characteristics. A shunt resistance R_p of metal oxide varistor has the temperature characteristics which is determined by the following equation.

$$R_p = A e^{E_g / 2kT} \quad (2)$$

T: Absolute temperature
k: Boltzmann constant
A, E_g: constants

Fig 3

As shown in the figure 3, the temperature dependence characteristics are shown clearly in the low current area.

Surge waveform

A surge waveform varies according to the sources. An EXP waveform is used for surge testing of ZENAMIC, while a AC half-wave is used for the energy absorption test. The EXP waveform reaches its peak voltage (current) at [t_a] as shown in the figure 5, and then decreases as time passes and reaches half of the peak voltage (current) at [t_b]. This type of the EXP waveform is shown as a [t_a/t_b] voltage (current) waveform. For surge testing of ZENAMIC, the 8/20 μ. sec current waveform is used.

Fig 5

Part Number.

Application notes(General)

1. A surge excess of the specified Maximum Peak Current may cause short circuit or mechanical damage. The following measures are recommended.
 - In case that ZENAMIC is used in line to ground, the ground fault circuit interrupter shall be applied in location A or thermally coupled fuse shall be applied in location C.
 - ZENAMIC shall not be used near heat generating device and free from direct sunlight.
 - ZENAMIC shall not be used near the flammable materials.

- 1) Location of the over current protector (circuit breaker or current fuse) shall be in the power line to the circuit (Location A) or in series with ZENAMIC (Location B).
- 2) It is recommended that a fuse listed in the table be put in location A or B.

3) In case that ZENAMIC is used in line to ground, the ground fault circuit interrupter should be applied in location A or thermally coupled fuse should be applied in location C.

Part Number	Z7D□□□	Z10D□□□
Rating of fuse	5A max.	7A max.

Part Number	Z15D□□□	Z21D□□□
Rating of fuse	10A max.	15A max.

Refer to the related Safety Standards.

Applications

Power lines and surge absorption units with error display (SA series).

WARRANTY

The manufacturer hereby warrants, that it will replace this product or any part thereof which shall prove to be defective in workmanship or material, subject to the following limitations:

- (1) This is only for the benefit of the original purchaser and to no other person, company or individual.
- (2) This warranty does not apply to defects caused by improper installation.
- (3) This warranty is limited to the replacement of the defective product, or part thereof, and does not include any labor costs for installation or removal of the product.
- (4) The manufacturer shall not be liable for indirect, consequential or special damages and is limited solely to replacement of the product.

If the product or any part thereof shall prove to be defective in workmanship or material, the original purchaser shall ship the product to the manufacturer in the original packing carton, together with a copy of the original sales receipt for the product, and, if in the opinion of the manufacturer, the product proves to be defective in workmanship or material, the sole obligation of the manufacturer shall be the replacement of the defective product or part thereof.

Shipping charges to the manufacturer is the obligation of the original purchaser.

This limited warranty is in lieu of and replaces all of the warranties previously given by the manufacturer, both express and implied, including any warranties of merchantability or fitness for a particular purpose. There are no warranties which extend beyond the face hereof.

No lawsuit may be commenced against the manufacturer unless the original consumer purchaser has complied with all of the terms and conditions of this warranty and the manufacturer has refused to comply therewith.
